

Dust Free Handling

Innovation always seems to come at a cost. continual improvement and cost reductions just don't normally come hand in hand. The EZI-DOCK™ Containment System offers a cost effective solution to powder & granulate containment and delivers a level of cleanliness that would normally involve significant capital investment.

EZI-DOCK™ What is it?

EZI-DOCK™ is a cost effective plastic, disposable, clean, hygienic filling and discharging system for FIBC's, Octabins, Bulk FCL's and kegs. The unique patented design provides rapid docking & disconnection as well as ensuring a dust tight seal is maintained at all times to prevent product contamination and operator exposure.

- 1) The EZI-DOCK™ has 2 simple disposable locking rings.
- 2) The rings snap into position onto a shaped liner spout.
- 3) Once the "choking restrictor is fitted the liner is ready to fill.

EZI-DOCK™ How does it operate?

EZI-DOCK™ can be easily and effectively operated with either a manual or a pneumatic clamping system. Existing materials handling equipment can be adapted or a complete new system can be supplied.

- 1) Locate the EZI-DOCK™ into the pneumatic clamp.
- 2) Engage the clamp to lock in place.
- 3) Remove the "choking" restrictor & the product can flow freely.

Suitable Products

- Food Ingredients
- Carbon Black
- Calcium Carbonate
- Polymer Chips
- Pharmaceuticals / Chemicals
- Tablets

EZI-DOCK™ - The Benefits

- Low Cost
- Simple to use
- Provides Easy, Rapid Docking & Disconnection of liner
- Dust Tight Seal
- Operator Friendly
