## Design by I Holland

## Rapid design and prototyping service

## Design by I Holland

As tablets become more complex in both shape and profile to strengthen brand identity and appeal to consumers, first-time-right tablet design is an increasingly critical step of the whole process. The right tablet design will help achieve trouble-free production, as well as specification and quality objectives of the product.

Design by I Holland is a service that not only gives you access to our expert engineers and tablet designers, but also allows you to see, hold and feel the initial concept before making substantial investments into production. With Design by I Holland, you will have the possibility to ensure that you are completely satisfied with your design prior to moving to the next step of the project, minimising risk and potentially expensive mistakes and re-designs. Our new rapid prototyping service allows you to receive sample models of your newly designed tablet to hold in your hand. Our experts also advise on various concerns including sticking and picking, tablet hardness and tooling performance for specific designs.

Design by I Holland includes:

- 5 actual size 3D printed tablets (1:1 scale)
- 1 enlarged 3D printed tablet (4:1 scale)
- USB portable drive with design files
- Free TSAR~Predict modelling to predict the best anti-sticking steel and coating solutions.
